

STATE PROJECT NO. 135-325

REHABILITATION OF BRIDGE NO. 00037

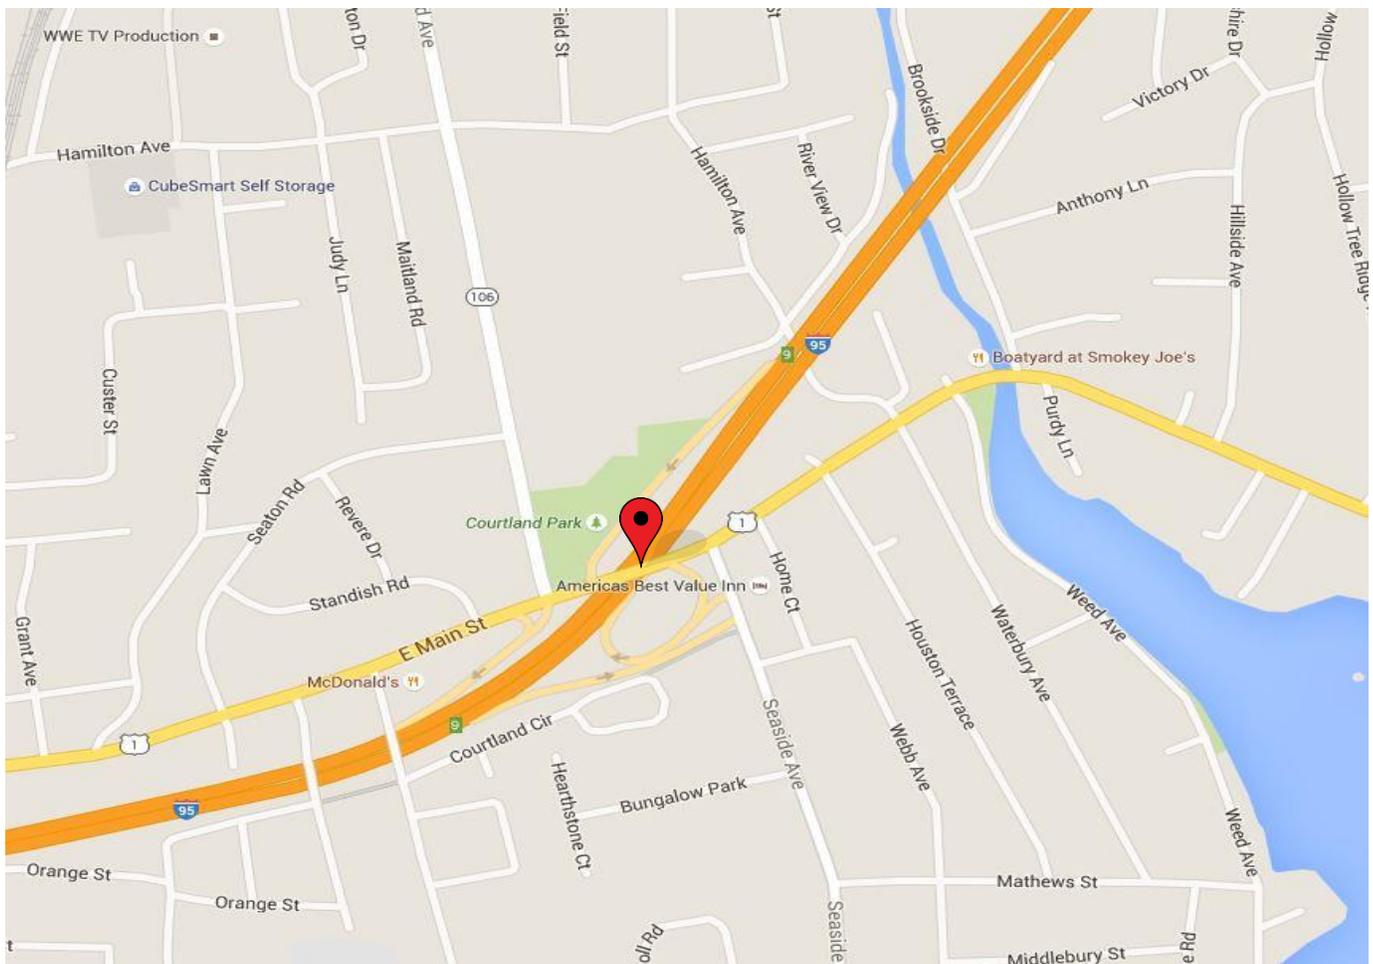

U.S. ROUTE 1 OVER INTERSTATE I-95, STAMFORD

Project Description

The Connecticut Department of Transportation has identified Bridge No. 00037, carrying U S Route 1 over I-95, as being in need of rehabilitation. The existing steel and concrete superstructure will be replaced with a new steel and concrete superstructure using accelerated bridge construction techniques. The accelerated construction scheme proposes the use of Self Propelled Modular Transports to remove and replace the superstructures utilizing a one weekend detour which may occur during the fall or winter of 2017. **The proposed detour for Route 1 uses State Route 106 (Courtland Ave.) and Hamilton Ave. The proposed detour for I-95 will be two lanes (SB & NB) via the on and off ramps.**

Construction

The project is anticipated to begin in the fall of 2016 and be completed in the spring of 2018. The detour shall be implemented for one weekend only. Once the detour period is complete, all lanes of traffic will be restored with off-peak lane closures required to perform certain activities. The estimated construction cost for this project is \$19,000,000.
